

Our environmental commitment

Proserv is committed to utilising its controls technologies to optimise the reliability and performance of energy assets, reducing the carbon emissions of our customers and supply chain, and supporting sustainable energy generation. We aim to be a net zero emissions company by 2040.

Our vision

Proserv will help to protect the planet's future by ensuring we remove more greenhouse gases from the atmosphere than we emit.

How will we become net zero?

CALCULATE carbon emissions and other greenhouse gases
REDUCE emissions wherever possible through increased efficiencies
SUPPORT the supply chain in doing the same
BALANCE the remainder using carbon offsets

Proserv's strategy aims to reduce, balance and support across all three emissions scopes.

SCOPE 1: all direct emissions from our activities are under our control.
SCOPE 2: indirect emissions from power sources purchased and used by Proserv.
SCOPE 3: all other indirect emissions from Proserv activities occurring from sources that we do not own or control.

Our aim to drive environmental efficiencies covers five main areas:

- Travel
- Power Consumption
- Waste
- Water
- Technology
