

Part of Proserv's suite of Measurement Software Solutions

proserv

Valid8

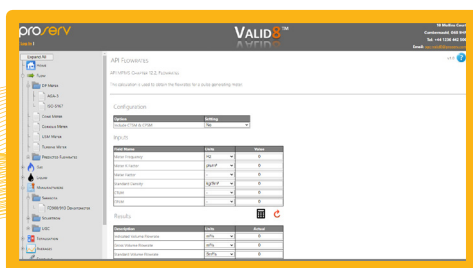

Flow computer calculation verification engine

In today's cost driven market there is a need to include more functionality in the supervisory system. To help users unlock the potential of their metering system and realise cost savings, we offer enhanced validation and verification features with Valid8™.

Your Solution

Calculation verification performed live, at the touch of a button.
No need for offline verification using third party software.

Features

- Extensive library of calculations
- Auditable records of previous results
- Condition based monitoring of dual HART transmitters
- Batch load recalculation based on proof results and lab values for standard density and water

Key benefits

Unlock the potential of your metering system

Reduces need to mobilise engineers offshore for manual intervention

Produces more accurate batch totals

Minimises maintenance costs

Allows for automatic control of sampling and stream switching

Verify calculations directly from the supervisory computer
