

Part of Proserv's suite of Measurement Software Solutions

proserv

Prognosis meter diagnostics

Reduce the risk of measurement errors with alerts to any potential differential pressure (DP) meter and transmitter faults. Our end-to-end solution goes one step further than traditional systems to both identify and quantify the fault to facilitate quick and confident action.

Your solution

The next generation of diagnostics.

- ✓ Real-time meter system accuracy assurance
- ✓ Condition based monitoring and diagnostics
- ✓ Early indication of measurement issues
- ✓ No future operator intervention required
- ✓ Financial exposure prevention

Powered by
DP Diagnostics

Exclusive to Proserv, our solution includes DP Diagnostics' Predict software, which evaluates how much the diagnosed fault is affecting the measured flow. Offering advanced data analytics, Prognosis provides enhanced identification of wet gas or plugged impulse.

Key benefits

Peace of mind with
enhanced pattern recognition to
easily identify problems

Protect against serious events with
immediate warning alerts

Reduce downtime and maintenance

Increase safety of on-site personnel

Save on meter recalibration costs

Minimise exposure and prevent
revenue loss

User friendly and easy to install
and configure
