

Proserv Spare Parts Service

Prevent costly unscheduled shutdowns and mitigate market-driven increased lead times with Proserv's spare parts service.

For over a decade, Proserv has been supplying mechanical and electrical spare parts to service companies and end users. With a global presence and strategic distribution partnerships with top OEM and non OEM manufacturers, we can ensure we will deliver the right part, on time, first time.

Obsolescence management

For existing systems, obsolescence becomes a serious issue when the part fails and disrupts production. Proserv's risk management programme is available as an additional service. Our engineers identify operationally critical components, assess technical drawings and BOMs and speak with suppliers to gain a comprehensive view of your system requirements. These insights drive the creation of a tailored report that recommends suitable spares to ensure production continuity.

- Check valves
- Relief valves
- Pilot valves
- Pressure indicators
- High pressure equipment
- Repair kits
- Pumps
- Motors
- Parts and spares for subsea control systems
- Parts and spares for subsea production
